

DUMMY HR POLICY

Recruitment Policy

Document Code: HR-REC-001

Version: 1.0 (Synthetic)

Status: TEST / SAMPLE ONLY

Document Owner	Human Resources - Dummy Owner
Effective Date	Not Applicable - Test Document
Review Cycle	Illustrative annual review
Classification	Internal Test Data
Purpose	Establish a consistent, merit-based, documented recruitment and selection process for all employee categories.

Important: This entire file is fictional and was created only for software testing, document ingestion, workflow simulations, search, OCR, RAG, and demonstration purposes. It must not be treated as a real company policy or legal guidance.

Contents

1. Policy Governance and Scope
2. Workforce Requisition Initiation
3. Job Description and Role Profile Standards
4. Recruitment Planning and Service Levels
5. Internal Recruitment and Mobility
6. External Sourcing Channels
7. Employer Branding and Vacancy Advertising
8. Application Intake and Candidate Records
9. Screening and Shortlisting
10. Assessment and Testing
11. Interview Governance
12. Candidate Due Diligence
13. Selection Decision and Approval
14. Offer Management
15. Pre-Employment Documentation
16. Candidate Communication Standards
17. Agency and Vendor Governance
18. Graduate, Internship and High-Volume Hiring
19. Data Privacy, Confidentiality and Access
20. Recruitment Metrics, Audit and Continuous Improvement

Each section begins on a new page to support testing of page-level retrieval, chunking, indexing, and navigation.

1. Policy Governance and Scope

Defines ownership, applicability, delegated authorities, document hierarchy, review cycle, and exception handling for recruitment activities.

Control Area	Illustrative Requirement
Owner	HR function or delegated process owner
Approval	Per documented authority matrix
Evidence	System record, document, approval, or audit trail
Exception	Documented and time-bound approval
Review	Periodic control and process review

Policy Statement

The organization will apply the policy governance and scope requirements consistently using documented approvals, role-based access, segregation of duties where relevant, and evidence sufficient for internal review. This dummy policy is intentionally generic and does not represent any real employer or legal requirement.

Roles and Responsibilities

HR owns the process framework and records. Business managers provide timely, accurate inputs and approvals. Employees or candidates provide truthful information where applicable. Control functions may review evidence according to their mandates.

Standard Procedure

Requests should be initiated through the approved channel, checked for completeness, routed to the authorized approver, recorded in the designated system or repository, and closed only after required evidence is attached and status is updated.

Required Records

Typical records may include request forms, approvals, supporting documents, assessment or transaction evidence, correspondence, system logs, exception notes, and closure confirmation. Test implementations may use synthetic records only.

Controls and Quality Checks

Key controls include mandatory fields, maker-checker review for sensitive actions, validation against approved master data, duplicate prevention, effective-date checks, exception reporting, and periodic sampling.

Exceptions and Escalation

Any deviation should be documented with the reason, risk, temporary mitigation, responsible owner, approving authority, and expiry or review date. Repeated exceptions should trigger process review.

Illustrative KPI Examples

Examples include turnaround time, first-time-right rate, backlog age, policy exception rate, completion rate, data quality error rate, and stakeholder satisfaction. No target values are prescribed in this dummy document.

Testing Scenario

For prototype testing, create a synthetic transaction with a fictional employee or candidate, route it through the expected workflow, verify role permissions, confirm the audit trail, and test both normal and exception paths.

Compliance Note

This sample document must be adapted to applicable labor, tax, privacy, social insurance, banking, regulatory, and contractual requirements before any real-world use. It is not legal advice.

Dummy Data Example

Field	Sample Value
Reference ID	HR-REC-001-01-TEST-0001
Person / Case	Synthetic Record - No Real Individual
Status	Completed - Test
Approval Evidence	Simulated approval timestamp
Notes	Sample scenario for policy governance and scope validation.

2. Workforce Requisition Initiation

Sets requirements for vacancy requests, justification, budget/headcount confirmation, job data completeness, and approval routing before sourcing starts.

Control Area	Illustrative Requirement
Owner	HR function or delegated process owner
Approval	Per documented authority matrix
Evidence	System record, document, approval, or audit trail
Exception	Documented and time-bound approval
Review	Periodic control and process review

Policy Statement

The organization will apply the workforce requisition initiation requirements consistently using documented approvals, role-based access, segregation of duties where relevant, and evidence sufficient for internal review. This dummy policy is intentionally generic and does not represent any real employer or legal requirement.

Roles and Responsibilities

HR owns the process framework and records. Business managers provide timely, accurate inputs and approvals. Employees or candidates provide truthful information where applicable. Control functions may review evidence according to their mandates.

Standard Procedure

Requests should be initiated through the approved channel, checked for completeness, routed to the authorized approver, recorded in the designated system or repository, and closed only after required evidence is attached and status is updated.

Required Records

Typical records may include request forms, approvals, supporting documents, assessment or transaction evidence, correspondence, system logs, exception notes, and closure confirmation. Test implementations may use synthetic records only.

Controls and Quality Checks

Key controls include mandatory fields, maker-checker review for sensitive actions, validation against approved master data, duplicate prevention, effective-date checks, exception reporting, and periodic sampling.

Exceptions and Escalation

Any deviation should be documented with the reason, risk, temporary mitigation, responsible owner, approving authority, and expiry or review date. Repeated exceptions should trigger process review.

Illustrative KPI Examples

Examples include turnaround time, first-time-right rate, backlog age, policy exception rate, completion rate, data quality error rate, and stakeholder satisfaction. No target values are prescribed in this dummy document.

Testing Scenario

For prototype testing, create a synthetic transaction with a fictional employee or candidate, route it through the expected workflow, verify role permissions, confirm the audit trail, and test both normal and exception paths.

Compliance Note

This sample document must be adapted to applicable labor, tax, privacy, social insurance, banking, regulatory, and contractual requirements before any real-world use. It is not legal advice.

Dummy Data Example

Field	Sample Value
Reference ID	HR-REC-001-02-TEST-0001
Person / Case	Synthetic Record - No Real Individual
Status	Completed - Test
Approval Evidence	Simulated approval timestamp
Notes	Sample scenario for workforce requisition initiation validation.

3. Job Description and Role Profile Standards

Requires current role purpose, key accountabilities, minimum qualifications, competencies, reporting line, work location, and employment type before advertising.

Control Area	Illustrative Requirement
Owner	HR function or delegated process owner
Approval	Per documented authority matrix
Evidence	System record, document, approval, or audit trail
Exception	Documented and time-bound approval
Review	Periodic control and process review

Policy Statement

The organization will apply the job description and role profile standards requirements consistently using documented approvals, role-based access, segregation of duties where relevant, and evidence sufficient for internal review. This dummy policy is intentionally generic and does not represent any real employer or legal requirement.

Roles and Responsibilities

HR owns the process framework and records. Business managers provide timely, accurate inputs and approvals. Employees or candidates provide truthful information where applicable. Control functions may review evidence according to their mandates.

Standard Procedure

Requests should be initiated through the approved channel, checked for completeness, routed to the authorized approver, recorded in the designated system or repository, and closed only after required evidence is attached and status is updated.

Required Records

Typical records may include request forms, approvals, supporting documents, assessment or transaction evidence, correspondence, system logs, exception notes, and closure confirmation. Test implementations may use synthetic records only.

Controls and Quality Checks

Key controls include mandatory fields, maker-checker review for sensitive actions, validation against approved master data, duplicate prevention, effective-date checks, exception reporting, and periodic sampling.

Exceptions and Escalation

Any deviation should be documented with the reason, risk, temporary mitigation, responsible owner, approving authority, and expiry or review date. Repeated exceptions should trigger process review.

Illustrative KPI Examples

Examples include turnaround time, first-time-right rate, backlog age, policy exception rate, completion rate, data quality error rate, and stakeholder satisfaction. No target values are prescribed in this dummy document.

Testing Scenario

For prototype testing, create a synthetic transaction with a fictional employee or candidate, route it through the expected workflow, verify role permissions, confirm the audit trail, and test both normal and exception paths.

Compliance Note

This sample document must be adapted to applicable labor, tax, privacy, social insurance, banking, regulatory, and contractual requirements before any real-world use. It is not legal advice.

Dummy Data Example

Field	Sample Value
Reference ID	HR-REC-001-03-TEST-0001
Person / Case	Synthetic Record - No Real Individual
Status	Completed - Test
Approval Evidence	Simulated approval timestamp
Notes	Sample scenario for job description and role profile standards validation.

4. Recruitment Planning and Service Levels

Defines planning checkpoints, target timelines, priority rules, recruiter allocation, escalation triggers, and status reporting for open requisitions.

Control Area	Illustrative Requirement
Owner	HR function or delegated process owner
Approval	Per documented authority matrix
Evidence	System record, document, approval, or audit trail
Exception	Documented and time-bound approval
Review	Periodic control and process review

Policy Statement

The organization will apply the recruitment planning and service levels requirements consistently using documented approvals, role-based access, segregation of duties where relevant, and evidence sufficient for internal review. This dummy policy is intentionally generic and does not represent any real employer or legal requirement.

Roles and Responsibilities

HR owns the process framework and records. Business managers provide timely, accurate inputs and approvals. Employees or candidates provide truthful information where applicable. Control functions may review evidence according to their mandates.

Standard Procedure

Requests should be initiated through the approved channel, checked for completeness, routed to the authorized approver, recorded in the designated system or repository, and closed only after required evidence is attached and status is updated.

Required Records

Typical records may include request forms, approvals, supporting documents, assessment or transaction evidence, correspondence, system logs, exception notes, and closure confirmation. Test implementations may use synthetic records only.

Controls and Quality Checks

Key controls include mandatory fields, maker-checker review for sensitive actions, validation against approved master data, duplicate prevention, effective-date checks, exception reporting, and periodic sampling.

Exceptions and Escalation

Any deviation should be documented with the reason, risk, temporary mitigation, responsible owner, approving authority, and expiry or review date. Repeated exceptions should trigger process review.

Illustrative KPI Examples

Examples include turnaround time, first-time-right rate, backlog age, policy exception rate, completion rate, data quality error rate, and stakeholder satisfaction. No target values are prescribed in this dummy document.

Testing Scenario

For prototype testing, create a synthetic transaction with a fictional employee or candidate, route it through the expected workflow, verify role permissions, confirm the audit trail, and test both normal and exception paths.

Compliance Note

This sample document must be adapted to applicable labor, tax, privacy, social insurance, banking, regulatory, and contractual requirements before any real-world use. It is not legal advice.

Dummy Data Example

Field	Sample Value
Reference ID	HR-REC-001-04-TEST-0001
Person / Case	Synthetic Record - No Real Individual
Status	Completed - Test
Approval Evidence	Simulated approval timestamp
Notes	Sample scenario for recruitment planning and service levels validation.

5. Internal Recruitment and Mobility

Explains internal posting, employee eligibility, manager notification, conflict handling, fair assessment, and transfer documentation.

Control Area	Illustrative Requirement
Owner	HR function or delegated process owner
Approval	Per documented authority matrix
Evidence	System record, document, approval, or audit trail
Exception	Documented and time-bound approval
Review	Periodic control and process review

Policy Statement

The organization will apply the internal recruitment and mobility requirements consistently using documented approvals, role-based access, segregation of duties where relevant, and evidence sufficient for internal review. This dummy policy is intentionally generic and does not represent any real employer or legal requirement.

Roles and Responsibilities

HR owns the process framework and records. Business managers provide timely, accurate inputs and approvals. Employees or candidates provide truthful information where applicable. Control functions may review evidence according to their mandates.

Standard Procedure

Requests should be initiated through the approved channel, checked for completeness, routed to the authorized approver, recorded in the designated system or repository, and closed only after required evidence is attached and status is updated.

Required Records

Typical records may include request forms, approvals, supporting documents, assessment or transaction evidence, correspondence, system logs, exception notes, and closure confirmation. Test implementations may use synthetic records only.

Controls and Quality Checks

Key controls include mandatory fields, maker-checker review for sensitive actions, validation against approved master data, duplicate prevention, effective-date checks, exception reporting, and periodic sampling.

Exceptions and Escalation

Any deviation should be documented with the reason, risk, temporary mitigation, responsible owner, approving authority, and expiry or review date. Repeated exceptions should trigger process review.

Illustrative KPI Examples

Examples include turnaround time, first-time-right rate, backlog age, policy exception rate, completion rate, data quality error rate, and stakeholder satisfaction. No target values are prescribed in this dummy document.

Testing Scenario

For prototype testing, create a synthetic transaction with a fictional employee or candidate, route it through the expected workflow, verify role permissions, confirm the audit trail, and test both normal and exception paths.

Compliance Note

This sample document must be adapted to applicable labor, tax, privacy, social insurance, banking, regulatory, and contractual requirements before any real-world use. It is not legal advice.

Dummy Data Example

Field	Sample Value
Reference ID	HR-REC-001-05-TEST-0001
Person / Case	Synthetic Record - No Real Individual
Status	Completed - Test
Approval Evidence	Simulated approval timestamp
Notes	Sample scenario for internal recruitment and mobility validation.

6. External Sourcing Channels

Covers approved job boards, agencies, universities, referrals, professional networks, talent communities, and control of unauthorized sourcing.

Control Area	Illustrative Requirement
Owner	HR function or delegated process owner
Approval	Per documented authority matrix
Evidence	System record, document, approval, or audit trail
Exception	Documented and time-bound approval
Review	Periodic control and process review

Policy Statement

The organization will apply the external sourcing channels requirements consistently using documented approvals, role-based access, segregation of duties where relevant, and evidence sufficient for internal review. This dummy policy is intentionally generic and does not represent any real employer or legal requirement.

Roles and Responsibilities

HR owns the process framework and records. Business managers provide timely, accurate inputs and approvals. Employees or candidates provide truthful information where applicable. Control functions may review evidence according to their mandates.

Standard Procedure

Requests should be initiated through the approved channel, checked for completeness, routed to the authorized approver, recorded in the designated system or repository, and closed only after required evidence is attached and status is updated.

Required Records

Typical records may include request forms, approvals, supporting documents, assessment or transaction evidence, correspondence, system logs, exception notes, and closure confirmation. Test implementations may use synthetic records only.

Controls and Quality Checks

Key controls include mandatory fields, maker-checker review for sensitive actions, validation against approved master data, duplicate prevention, effective-date checks, exception reporting, and periodic sampling.

Exceptions and Escalation

Any deviation should be documented with the reason, risk, temporary mitigation, responsible owner, approving authority, and expiry or review date. Repeated exceptions should trigger process review.

Illustrative KPI Examples

Examples include turnaround time, first-time-right rate, backlog age, policy exception rate, completion rate, data quality error rate, and stakeholder satisfaction. No target values are prescribed in this dummy document.

Testing Scenario

For prototype testing, create a synthetic transaction with a fictional employee or candidate, route it through the expected workflow, verify role permissions, confirm the audit trail, and test both normal and exception paths.

Compliance Note

This sample document must be adapted to applicable labor, tax, privacy, social insurance, banking, regulatory, and contractual requirements before any real-world use. It is not legal advice.

Dummy Data Example

Field	Sample Value
Reference ID	HR-REC-001-06-TEST-0001
Person / Case	Synthetic Record - No Real Individual
Status	Completed - Test
Approval Evidence	Simulated approval timestamp
Notes	Sample scenario for external sourcing channels validation.

7. Employer Branding and Vacancy Advertising

Defines minimum advertisement content, inclusive language, brand controls, approval requirements, and prohibited claims.

Control Area	Illustrative Requirement
Owner	HR function or delegated process owner
Approval	Per documented authority matrix
Evidence	System record, document, approval, or audit trail
Exception	Documented and time-bound approval
Review	Periodic control and process review

Policy Statement

The organization will apply the employer branding and vacancy advertising requirements consistently using documented approvals, role-based access, segregation of duties where relevant, and evidence sufficient for internal review. This dummy policy is intentionally generic and does not represent any real employer or legal requirement.

Roles and Responsibilities

HR owns the process framework and records. Business managers provide timely, accurate inputs and approvals. Employees or candidates provide truthful information where applicable. Control functions may review evidence according to their mandates.

Standard Procedure

Requests should be initiated through the approved channel, checked for completeness, routed to the authorized approver, recorded in the designated system or repository, and closed only after required evidence is attached and status is updated.

Required Records

Typical records may include request forms, approvals, supporting documents, assessment or transaction evidence, correspondence, system logs, exception notes, and closure confirmation. Test implementations may use synthetic records only.

Controls and Quality Checks

Key controls include mandatory fields, maker-checker review for sensitive actions, validation against approved master data, duplicate prevention, effective-date checks, exception reporting, and periodic sampling.

Exceptions and Escalation

Any deviation should be documented with the reason, risk, temporary mitigation, responsible owner, approving authority, and expiry or review date. Repeated exceptions should trigger process review.

Illustrative KPI Examples

Examples include turnaround time, first-time-right rate, backlog age, policy exception rate, completion rate, data quality error rate, and stakeholder satisfaction. No target values are prescribed in this dummy document.

Testing Scenario

For prototype testing, create a synthetic transaction with a fictional employee or candidate, route it through the expected workflow, verify role permissions, confirm the audit trail, and test both normal and exception paths.

Compliance Note

This sample document must be adapted to applicable labor, tax, privacy, social insurance, banking, regulatory, and contractual requirements before any real-world use. It is not legal advice.

Dummy Data Example

Field	Sample Value
Reference ID	HR-REC-001-07-TEST-0001
Person / Case	Synthetic Record - No Real Individual
Status	Completed - Test
Approval Evidence	Simulated approval timestamp
Notes	Sample scenario for employer branding and vacancy advertising validation.

8. Application Intake and Candidate Records

Sets standards for candidate data capture, duplicate records, application acknowledgement, status coding, retention, and auditability.

Control Area	Illustrative Requirement
Owner	HR function or delegated process owner
Approval	Per documented authority matrix
Evidence	System record, document, approval, or audit trail
Exception	Documented and time-bound approval
Review	Periodic control and process review

Policy Statement

The organization will apply the application intake and candidate records requirements consistently using documented approvals, role-based access, segregation of duties where relevant, and evidence sufficient for internal review. This dummy policy is intentionally generic and does not represent any real employer or legal requirement.

Roles and Responsibilities

HR owns the process framework and records. Business managers provide timely, accurate inputs and approvals. Employees or candidates provide truthful information where applicable. Control functions may review evidence according to their mandates.

Standard Procedure

Requests should be initiated through the approved channel, checked for completeness, routed to the authorized approver, recorded in the designated system or repository, and closed only after required evidence is attached and status is updated.

Required Records

Typical records may include request forms, approvals, supporting documents, assessment or transaction evidence, correspondence, system logs, exception notes, and closure confirmation. Test implementations may use synthetic records only.

Controls and Quality Checks

Key controls include mandatory fields, maker-checker review for sensitive actions, validation against approved master data, duplicate prevention, effective-date checks, exception reporting, and periodic sampling.

Exceptions and Escalation

Any deviation should be documented with the reason, risk, temporary mitigation, responsible owner, approving authority, and expiry or review date. Repeated exceptions should trigger process review.

Illustrative KPI Examples

Examples include turnaround time, first-time-right rate, backlog age, policy exception rate, completion rate, data quality error rate, and stakeholder satisfaction. No target values are prescribed in this dummy document.

Testing Scenario

For prototype testing, create a synthetic transaction with a fictional employee or candidate, route it through the expected workflow, verify role permissions, confirm the audit trail, and test both normal and exception paths.

Compliance Note

This sample document must be adapted to applicable labor, tax, privacy, social insurance, banking, regulatory, and contractual requirements before any real-world use. It is not legal advice.

Dummy Data Example

Field	Sample Value
Reference ID	HR-REC-001-08-TEST-0001
Person / Case	Synthetic Record - No Real Individual
Status	Completed - Test
Approval Evidence	Simulated approval timestamp
Notes	Sample scenario for application intake and candidate records validation.

9. Screening and Shortlisting

Establishes objective screening criteria, evidence-based shortlisting, qualification checks, conflict-of-interest declarations, and reviewer accountability.

Control Area	Illustrative Requirement
Owner	HR function or delegated process owner
Approval	Per documented authority matrix
Evidence	System record, document, approval, or audit trail
Exception	Documented and time-bound approval
Review	Periodic control and process review

Policy Statement

The organization will apply the screening and shortlisting requirements consistently using documented approvals, role-based access, segregation of duties where relevant, and evidence sufficient for internal review. This dummy policy is intentionally generic and does not represent any real employer or legal requirement.

Roles and Responsibilities

HR owns the process framework and records. Business managers provide timely, accurate inputs and approvals. Employees or candidates provide truthful information where applicable. Control functions may review evidence according to their mandates.

Standard Procedure

Requests should be initiated through the approved channel, checked for completeness, routed to the authorized approver, recorded in the designated system or repository, and closed only after required evidence is attached and status is updated.

Required Records

Typical records may include request forms, approvals, supporting documents, assessment or transaction evidence, correspondence, system logs, exception notes, and closure confirmation. Test implementations may use synthetic records only.

Controls and Quality Checks

Key controls include mandatory fields, maker-checker review for sensitive actions, validation against approved master data, duplicate prevention, effective-date checks, exception reporting, and periodic sampling.

Exceptions and Escalation

Any deviation should be documented with the reason, risk, temporary mitigation, responsible owner, approving authority, and expiry or review date. Repeated exceptions should trigger process review.

Illustrative KPI Examples

Examples include turnaround time, first-time-right rate, backlog age, policy exception rate, completion rate, data quality error rate, and stakeholder satisfaction. No target values are prescribed in this dummy document.

Testing Scenario

For prototype testing, create a synthetic transaction with a fictional employee or candidate, route it through the expected workflow, verify role permissions, confirm the audit trail, and test both normal and exception paths.

Compliance Note

This sample document must be adapted to applicable labor, tax, privacy, social insurance, banking, regulatory, and contractual requirements before any real-world use. It is not legal advice.

Dummy Data Example

Field	Sample Value
Reference ID	HR-REC-001-09-TEST-0001
Person / Case	Synthetic Record - No Real Individual
Status	Completed - Test
Approval Evidence	Simulated approval timestamp
Notes	Sample scenario for screening and shortlisting validation.

10. Assessment and Testing

Covers approved tests, assessment centers, technical tasks, psychometric tools, accessibility, scoring, validity, and result documentation.

Control Area	Illustrative Requirement
Owner	HR function or delegated process owner
Approval	Per documented authority matrix
Evidence	System record, document, approval, or audit trail
Exception	Documented and time-bound approval
Review	Periodic control and process review

Policy Statement

The organization will apply the assessment and testing requirements consistently using documented approvals, role-based access, segregation of duties where relevant, and evidence sufficient for internal review. This dummy policy is intentionally generic and does not represent any real employer or legal requirement.

Roles and Responsibilities

HR owns the process framework and records. Business managers provide timely, accurate inputs and approvals. Employees or candidates provide truthful information where applicable. Control functions may review evidence according to their mandates.

Standard Procedure

Requests should be initiated through the approved channel, checked for completeness, routed to the authorized approver, recorded in the designated system or repository, and closed only after required evidence is attached and status is updated.

Required Records

Typical records may include request forms, approvals, supporting documents, assessment or transaction evidence, correspondence, system logs, exception notes, and closure confirmation. Test implementations may use synthetic records only.

Controls and Quality Checks

Key controls include mandatory fields, maker-checker review for sensitive actions, validation against approved master data, duplicate prevention, effective-date checks, exception reporting, and periodic sampling.

Exceptions and Escalation

Any deviation should be documented with the reason, risk, temporary mitigation, responsible owner, approving authority, and expiry or review date. Repeated exceptions should trigger process review.

Illustrative KPI Examples

Examples include turnaround time, first-time-right rate, backlog age, policy exception rate, completion rate, data quality error rate, and stakeholder satisfaction. No target values are prescribed in this dummy document.

Testing Scenario

For prototype testing, create a synthetic transaction with a fictional employee or candidate, route it through the expected workflow, verify role permissions, confirm the audit trail, and test both normal and exception paths.

Compliance Note

This sample document must be adapted to applicable labor, tax, privacy, social insurance, banking, regulatory, and contractual requirements before any real-world use. It is not legal advice.

Dummy Data Example

Field	Sample Value
Reference ID	HR-REC-001-10-TEST-0001
Person / Case	Synthetic Record - No Real Individual
Status	Completed - Test
Approval Evidence	Simulated approval timestamp
Notes	Sample scenario for assessment and testing validation.

11. Interview Governance

Defines panel composition, structured questions, scoring guides, note-taking, prohibited questions, virtual interviews, and decision records.

Control Area	Illustrative Requirement
Owner	HR function or delegated process owner
Approval	Per documented authority matrix
Evidence	System record, document, approval, or audit trail
Exception	Documented and time-bound approval
Review	Periodic control and process review

Policy Statement

The organization will apply the interview governance requirements consistently using documented approvals, role-based access, segregation of duties where relevant, and evidence sufficient for internal review. This dummy policy is intentionally generic and does not represent any real employer or legal requirement.

Roles and Responsibilities

HR owns the process framework and records. Business managers provide timely, accurate inputs and approvals. Employees or candidates provide truthful information where applicable. Control functions may review evidence according to their mandates.

Standard Procedure

Requests should be initiated through the approved channel, checked for completeness, routed to the authorized approver, recorded in the designated system or repository, and closed only after required evidence is attached and status is updated.

Required Records

Typical records may include request forms, approvals, supporting documents, assessment or transaction evidence, correspondence, system logs, exception notes, and closure confirmation. Test implementations may use synthetic records only.

Controls and Quality Checks

Key controls include mandatory fields, maker-checker review for sensitive actions, validation against approved master data, duplicate prevention, effective-date checks, exception reporting, and periodic sampling.

Exceptions and Escalation

Any deviation should be documented with the reason, risk, temporary mitigation, responsible owner, approving authority, and expiry or review date. Repeated exceptions should trigger process review.

Illustrative KPI Examples

Examples include turnaround time, first-time-right rate, backlog age, policy exception rate, completion rate, data quality error rate, and stakeholder satisfaction. No target values are prescribed in this dummy document.

Testing Scenario

For prototype testing, create a synthetic transaction with a fictional employee or candidate, route it through the expected workflow, verify role permissions, confirm the audit trail, and test both normal and exception paths.

Compliance Note

This sample document must be adapted to applicable labor, tax, privacy, social insurance, banking, regulatory, and contractual requirements before any real-world use. It is not legal advice.

Dummy Data Example

Field	Sample Value
Reference ID	HR-REC-001-11-TEST-0001
Person / Case	Synthetic Record - No Real Individual
Status	Completed - Test
Approval Evidence	Simulated approval timestamp
Notes	Sample scenario for interview governance validation.

12. Candidate Due Diligence

Addresses identity, qualification, employment, reference and other permissible pre-employment checks, subject to applicable law and role risk.

Control Area	Illustrative Requirement
Owner	HR function or delegated process owner
Approval	Per documented authority matrix
Evidence	System record, document, approval, or audit trail
Exception	Documented and time-bound approval
Review	Periodic control and process review

Policy Statement

The organization will apply the candidate due diligence requirements consistently using documented approvals, role-based access, segregation of duties where relevant, and evidence sufficient for internal review. This dummy policy is intentionally generic and does not represent any real employer or legal requirement.

Roles and Responsibilities

HR owns the process framework and records. Business managers provide timely, accurate inputs and approvals. Employees or candidates provide truthful information where applicable. Control functions may review evidence according to their mandates.

Standard Procedure

Requests should be initiated through the approved channel, checked for completeness, routed to the authorized approver, recorded in the designated system or repository, and closed only after required evidence is attached and status is updated.

Required Records

Typical records may include request forms, approvals, supporting documents, assessment or transaction evidence, correspondence, system logs, exception notes, and closure confirmation. Test implementations may use synthetic records only.

Controls and Quality Checks

Key controls include mandatory fields, maker-checker review for sensitive actions, validation against approved master data, duplicate prevention, effective-date checks, exception reporting, and periodic sampling.

Exceptions and Escalation

Any deviation should be documented with the reason, risk, temporary mitigation, responsible owner, approving authority, and expiry or review date. Repeated exceptions should trigger process review.

Illustrative KPI Examples

Examples include turnaround time, first-time-right rate, backlog age, policy exception rate, completion rate, data quality error rate, and stakeholder satisfaction. No target values are prescribed in this dummy document.

Testing Scenario

For prototype testing, create a synthetic transaction with a fictional employee or candidate, route it through the expected workflow, verify role permissions, confirm the audit trail, and test both normal and exception paths.

Compliance Note

This sample document must be adapted to applicable labor, tax, privacy, social insurance, banking, regulatory, and contractual requirements before any real-world use. It is not legal advice.

Dummy Data Example

Field	Sample Value
Reference ID	HR-REC-001-12-TEST-0001
Person / Case	Synthetic Record - No Real Individual
Status	Completed - Test
Approval Evidence	Simulated approval timestamp
Notes	Sample scenario for candidate due diligence validation.

13. Selection Decision and Approval

Requires consolidated evaluation, documented rationale, approval matrix compliance, tie-break approach, and exception escalation.

Control Area	Illustrative Requirement
Owner	HR function or delegated process owner
Approval	Per documented authority matrix
Evidence	System record, document, approval, or audit trail
Exception	Documented and time-bound approval
Review	Periodic control and process review

Policy Statement

The organization will apply the selection decision and approval requirements consistently using documented approvals, role-based access, segregation of duties where relevant, and evidence sufficient for internal review. This dummy policy is intentionally generic and does not represent any real employer or legal requirement.

Roles and Responsibilities

HR owns the process framework and records. Business managers provide timely, accurate inputs and approvals. Employees or candidates provide truthful information where applicable. Control functions may review evidence according to their mandates.

Standard Procedure

Requests should be initiated through the approved channel, checked for completeness, routed to the authorized approver, recorded in the designated system or repository, and closed only after required evidence is attached and status is updated.

Required Records

Typical records may include request forms, approvals, supporting documents, assessment or transaction evidence, correspondence, system logs, exception notes, and closure confirmation. Test implementations may use synthetic records only.

Controls and Quality Checks

Key controls include mandatory fields, maker-checker review for sensitive actions, validation against approved master data, duplicate prevention, effective-date checks, exception reporting, and periodic sampling.

Exceptions and Escalation

Any deviation should be documented with the reason, risk, temporary mitigation, responsible owner, approving authority, and expiry or review date. Repeated exceptions should trigger process review.

Illustrative KPI Examples

Examples include turnaround time, first-time-right rate, backlog age, policy exception rate, completion rate, data quality error rate, and stakeholder satisfaction. No target values are prescribed in this dummy document.

Testing Scenario

For prototype testing, create a synthetic transaction with a fictional employee or candidate, route it through the expected workflow, verify role permissions, confirm the audit trail, and test both normal and exception paths.

Compliance Note

This sample document must be adapted to applicable labor, tax, privacy, social insurance, banking, regulatory, and contractual requirements before any real-world use. It is not legal advice.

Dummy Data Example

Field	Sample Value
Reference ID	HR-REC-001-13-TEST-0001
Person / Case	Synthetic Record - No Real Individual
Status	Completed - Test
Approval Evidence	Simulated approval timestamp
Notes	Sample scenario for selection decision and approval validation.

14. Offer Management

Covers compensation alignment, offer authorization, offer validity, negotiation boundaries, conditional clauses, and written acceptance.

Control Area	Illustrative Requirement
Owner	HR function or delegated process owner
Approval	Per documented authority matrix
Evidence	System record, document, approval, or audit trail
Exception	Documented and time-bound approval
Review	Periodic control and process review

Policy Statement

The organization will apply the offer management requirements consistently using documented approvals, role-based access, segregation of duties where relevant, and evidence sufficient for internal review. This dummy policy is intentionally generic and does not represent any real employer or legal requirement.

Roles and Responsibilities

HR owns the process framework and records. Business managers provide timely, accurate inputs and approvals. Employees or candidates provide truthful information where applicable. Control functions may review evidence according to their mandates.

Standard Procedure

Requests should be initiated through the approved channel, checked for completeness, routed to the authorized approver, recorded in the designated system or repository, and closed only after required evidence is attached and status is updated.

Required Records

Typical records may include request forms, approvals, supporting documents, assessment or transaction evidence, correspondence, system logs, exception notes, and closure confirmation. Test implementations may use synthetic records only.

Controls and Quality Checks

Key controls include mandatory fields, maker-checker review for sensitive actions, validation against approved master data, duplicate prevention, effective-date checks, exception reporting, and periodic sampling.

Exceptions and Escalation

Any deviation should be documented with the reason, risk, temporary mitigation, responsible owner, approving authority, and expiry or review date. Repeated exceptions should trigger process review.

Illustrative KPI Examples

Examples include turnaround time, first-time-right rate, backlog age, policy exception rate, completion rate, data quality error rate, and stakeholder satisfaction. No target values are prescribed in this dummy document.

Testing Scenario

For prototype testing, create a synthetic transaction with a fictional employee or candidate, route it through the expected workflow, verify role permissions, confirm the audit trail, and test both normal and exception paths.

Compliance Note

This sample document must be adapted to applicable labor, tax, privacy, social insurance, banking, regulatory, and contractual requirements before any real-world use. It is not legal advice.

Dummy Data Example

Field	Sample Value
Reference ID	HR-REC-001-14-TEST-0001
Person / Case	Synthetic Record - No Real Individual
Status	Completed - Test
Approval Evidence	Simulated approval timestamp
Notes	Sample scenario for offer management validation.

15. Pre-Employment Documentation

Defines required forms and documents, document authenticity checks, incomplete-file handling, and handover to HR Operations.

Control Area	Illustrative Requirement
Owner	HR function or delegated process owner
Approval	Per documented authority matrix
Evidence	System record, document, approval, or audit trail
Exception	Documented and time-bound approval
Review	Periodic control and process review

Policy Statement

The organization will apply the pre-employment documentation requirements consistently using documented approvals, role-based access, segregation of duties where relevant, and evidence sufficient for internal review. This dummy policy is intentionally generic and does not represent any real employer or legal requirement.

Roles and Responsibilities

HR owns the process framework and records. Business managers provide timely, accurate inputs and approvals. Employees or candidates provide truthful information where applicable. Control functions may review evidence according to their mandates.

Standard Procedure

Requests should be initiated through the approved channel, checked for completeness, routed to the authorized approver, recorded in the designated system or repository, and closed only after required evidence is attached and status is updated.

Required Records

Typical records may include request forms, approvals, supporting documents, assessment or transaction evidence, correspondence, system logs, exception notes, and closure confirmation. Test implementations may use synthetic records only.

Controls and Quality Checks

Key controls include mandatory fields, maker-checker review for sensitive actions, validation against approved master data, duplicate prevention, effective-date checks, exception reporting, and periodic sampling.

Exceptions and Escalation

Any deviation should be documented with the reason, risk, temporary mitigation, responsible owner, approving authority, and expiry or review date. Repeated exceptions should trigger process review.

Illustrative KPI Examples

Examples include turnaround time, first-time-right rate, backlog age, policy exception rate, completion rate, data quality error rate, and stakeholder satisfaction. No target values are prescribed in this dummy document.

Testing Scenario

For prototype testing, create a synthetic transaction with a fictional employee or candidate, route it through the expected workflow, verify role permissions, confirm the audit trail, and test both normal and exception paths.

Compliance Note

This sample document must be adapted to applicable labor, tax, privacy, social insurance, banking, regulatory, and contractual requirements before any real-world use. It is not legal advice.

Dummy Data Example

Field	Sample Value
Reference ID	HR-REC-001-15-TEST-0001
Person / Case	Synthetic Record - No Real Individual
Status	Completed - Test
Approval Evidence	Simulated approval timestamp
Notes	Sample scenario for pre-employment documentation validation.

16. Candidate Communication Standards

Sets expectations for timely, respectful, consistent communication with shortlisted, rejected, withdrawn, and offered candidates.

Control Area	Illustrative Requirement
Owner	HR function or delegated process owner
Approval	Per documented authority matrix
Evidence	System record, document, approval, or audit trail
Exception	Documented and time-bound approval
Review	Periodic control and process review

Policy Statement

The organization will apply the candidate communication standards requirements consistently using documented approvals, role-based access, segregation of duties where relevant, and evidence sufficient for internal review. This dummy policy is intentionally generic and does not represent any real employer or legal requirement.

Roles and Responsibilities

HR owns the process framework and records. Business managers provide timely, accurate inputs and approvals. Employees or candidates provide truthful information where applicable. Control functions may review evidence according to their mandates.

Dummy Data Example

Field	Sample Value
Reference ID	HR-REC-001-16-TEST-0001
Person / Case	Synthetic Record - No Real Individual
Status	Completed - Test
Approval Evidence	Simulated approval timestamp
Notes	Sample scenario for candidate communication standards validation.

17. Agency and Vendor Governance

Defines approved supplier onboarding, service expectations, candidate ownership rules, duplicate submissions, performance reviews, and confidentiality.

Control Area	Illustrative Requirement
Owner	HR function or delegated process owner
Approval	Per documented authority matrix
Evidence	System record, document, approval, or audit trail
Exception	Documented and time-bound approval
Review	Periodic control and process review

Policy Statement

The organization will apply the agency and vendor governance requirements consistently using documented approvals, role-based access, segregation of duties where relevant, and evidence sufficient for internal review. This dummy policy is intentionally generic and does not represent any real employer or legal requirement.

Roles and Responsibilities

Dummy Data Example

Field	Sample Value
Reference ID	HR-REC-001-17-TEST-0001
Person / Case	Synthetic Record - No Real Individual
Status	Completed - Test
Approval Evidence	Simulated approval timestamp
Notes	Sample scenario for agency and vendor governance validation.

18. Graduate, Internship and High-Volume Hiring

Provides adapted controls for campaigns, campus hiring, internships, bulk screening, group assessments, and event-based recruitment.

Control Area	Illustrative Requirement
Owner	HR function or delegated process owner
Approval	Per documented authority matrix
Evidence	System record, document, approval, or audit trail
Exception	Documented and time-bound approval
Review	Periodic control and process review

Policy Statement

The organization will apply the graduate, internship and high-volume hiring requirements consistently using documented approvals, role-based access, segregation of duties where relevant, and evidence sufficient for internal review. This dummy policy is intentionally generic and does not represent any real employer or legal requirement.

Roles and Responsibilities

HR owns the process framework and records. Business managers provide timely, accurate inputs and approvals. Employees or candidates provide truthful information where applicable. Control functions may review evidence according to their mandates.

Dummy Data Example

Field	Sample Value
Reference ID	HR-REC-001-18-TEST-0001
Person / Case	Synthetic Record - No Real Individual
Status	Completed - Test
Approval Evidence	Simulated approval timestamp
Notes	Sample scenario for graduate, internship and high-volume hiring validation.

19. Data Privacy, Confidentiality and Access

Establishes need-to-know access, secure handling, consent where required, retention limits, deletion rules, and confidentiality expectations.

Control Area	Illustrative Requirement
Owner	HR function or delegated process owner
Approval	Per documented authority matrix
Evidence	System record, document, approval, or audit trail
Exception	Documented and time-bound approval
Review	Periodic control and process review

Policy Statement

The organization will apply the data privacy, confidentiality and access requirements consistently using documented approvals, role-based access, segregation of duties where relevant, and evidence sufficient for internal review. This dummy policy is intentionally generic and does not represent any real employer or legal requirement.

Roles and Responsibilities

Key controls include mandatory fields, maker-checker review for sensitive actions, validation against approved master data, duplicate prevention, effective-date checks, exception reporting, and periodic sampling.

Exceptions and Escalation

Any deviation should be documented with the reason, risk, temporary mitigation, responsible owner, approving authority, and expiry or review date. Repeated exceptions should trigger process review.

Illustrative KPI Examples

Examples include turnaround time, first-time-right rate, backlog age, policy exception rate, completion rate, data quality error rate, and stakeholder satisfaction. No target values are prescribed in this dummy document.

Testing Scenario

For prototype testing, create a synthetic transaction with a fictional employee or candidate, route it through the expected workflow, verify role permissions, confirm the audit trail, and test both normal and exception paths.

Compliance Note

This sample document must be adapted to applicable labor, tax, privacy, social insurance, banking, regulatory, and contractual requirements before any real-world use. It is not legal advice.

Dummy Data Example

Field	Sample Value
Reference ID	HR-REC-001-19-TEST-0001
Person / Case	Synthetic Record - No Real Individual
Status	Completed - Test
Approval Evidence	Simulated approval timestamp
Notes	Sample scenario for data privacy, confidentiality and access validation.

20. Recruitment Metrics, Audit and Continuous Improvement

Defines sample KPIs, quality checks, audit evidence, root-cause review, lessons learned, and policy review cadence.

Control Area	Illustrative Requirement
Owner	HR function or delegated process owner
Approval	Per documented authority matrix
Evidence	System record, document, approval, or audit trail
Exception	Documented and time-bound approval
Review	Periodic control and process review

Policy Statement

The organization will apply the recruitment metrics, audit and continuous improvement requirements consistently using documented approvals, role-based access, segregation of duties where relevant, and evidence sufficient for internal review. This dummy policy is intentionally generic and does not represent any real employer or legal requirement.

Roles and Responsibilities

HR owns the process framework and records. Business managers provide timely, accurate inputs and approvals. Employees or candidates provide truthful information where applicable. Control functions may review evidence according to their mandates.
